Mid-Module 3 STUDY GUIDE

Directions: Show all work for full credit.

1. Use the expression below to answer parts (a) and (b).

$$-36y - 4(x - 5y) + \frac{1}{3}(6y - 9x)$$

- a. Write an equivalent expression in standard form, and collect like terms.

- b. Express the answer from part (a) as an equivalent expression in factored form.
(Hint: Find a common factor)

2. Use the information to solve the problems below.

- a. The longest side of a trapezoid is 2 cm longer than the shortest side. The remaining two sides are both three times as long as the shortest side. If the perimeter of the trapezoid is 32 cm, write and solve an equation to find the lengths of all four sides of the trapezoid.

Name: _____ Date: _____

- b. The length of a rectangle is $(y - 5)$ inches long, and the width is $4\frac{2}{5}$ inches. If the area is $14\frac{2}{3}$ square inches, write and solve an equation to find the length of the rectangle.

3. A picture $9\frac{1}{3}$ feet long is to be centered on a wall that is $19\frac{1}{2}$ feet long. How much space is there from the edge of the wall to the picture?

- a. Solve the problem arithmetically.

Name: _____ Date: _____

b. Solve the problem algebraically.

c. Compare the approaches used in parts (a) and (b). Explain how they are similar.

4. In August, Mrs. Wood begins school shopping for her 7th grade classroom.

a. One day, she bought 30 dry-erase markers for \$0.75 each and 12 dry erasers for x dollars each. She spent a total of \$39.34. Write and solve an equation to find the cost of one dry eraser.

Name: _____ Date: _____

- b. The following day, Mrs. Wood returned to the store to purchase some more markers. She had \$30 to spend. When she arrived at the store, the erasers were $\frac{1}{3}$ off. What is the greatest amount of markers Mrs. Wood can purchase if she purchases another eraser in addition to the markers?

Hint: First find the sale price of the erasers. Sale price = original price – discount

Next, write and solve an inequality to determine how many markers can be purchased given that she only has \$30 to spend and already bought an eraser.

5. Harper wants to have a paintball party for his birthday with a few of his friends, but he can spend no more than \$150. The paintball place charges a flat fee of \$55 for a private party and \$12.50 per person for supplies.

- a. Write an inequality that represents the total cost of Harper's birthday for p people given his budget.

- b. How many people can Harper pay for (including himself) while staying within the limitations of his budget?

- c. Graph the solution of the inequality from part (a).

Name: _____ Date: _____

6. Mackenna and Gia are planning to go skating with Mackenna's family. The rink charges one rate for four-wheel skate rentals and another rate for inline skate rentals. Mackenna and Gia both decided to rent inline skates, while Mackenna's brother, mom and dad all decided to rent four-wheel skates.
- a. Write an expression for the total cost of the skate rentals. Define the variables.
- b. The cost of the inline skate rental was double the cost of the four-wheel skates. Write an equation to represent the relationship between the two types of rentals.
- c. The family purchased refreshments and spent a total of \$21.75. If the total amount of money spent on rentals and refreshments was \$72.50, use an equation to find the cost of one four-wheel skate rental.

Name: _____ Date: _____

7. The three lines shown in the diagram below intersect at the same point. The measures of some of the angles in degrees are given as $2(-2 - y)^\circ$, $\frac{2}{5}x^\circ$, 17° , 36° .

- a. Write and solve an equation that can be used to find the value of y .
Hint: Use your knowledge of vertical angles.

- b. Write and solve an equation that can be used to find the value of x .
Hint: Remember how many degrees are in a straight line.
